1 Introduction

Packaging has become an indispensable part of our everyday lives. Yet they have a considerable impact on the environment. Packaging is one of the main users of virgin materials (40 % of plastics and 50 % of paper used in the EU is destined for packaging) and accounts for 36 % of municipal solid waste. The increased use of packaging combined with low re-use and recycling rates hinder the development of a low-carbon circular economy.¹

In 1994, the Packaging and Packaging Waste Directive (PPWD) was introduced, which first presented the concept of "shared responsibility", which in the following years became known as "Extended Producer Responsibility" (EPR). In 2018, the EPR principle became the main measure for Member States to ensure that producers of packaging bear the financial and/or operational responsibility for packaging, from design to final disposal, through the amending Directive 2018/851. Finally, the revision of Directive 2018/852/CE on packaging and packaging waste introduced a new obligation for EU Member States, which are now required to set up a specific EPR system for packaging by 2025, usually through organizations (funded by the producers and/or users of packaging themselves, so-called Producer Responsibility Organizations (PROs)) that take responsibility for it on behalf of their members. The recently presented proposal for an updated PPWD specifically highlights the options to set incentives for more circular packaging solutions by eco-modulated licensing fees.

European countries have different EPR models for packaging as they are developed depending on specific characteristics of the countries (e. g. socio-cultural, macro-economic and organizational variables of the waste system). In each model, an environmental contribution, i. e. a fee, is set, which is used to cover all costs of the necessary activities (collection, sorting, recycling). The fees are also based on environmental factors and are different for the materials considered.

In this report, fees from 18 countries are compared. Five packaging solutions common to all PROs were analyzed to compare countries and identify trends.

2 Methodology

First, the Main PRO representing the functionality of the respective national EPR system for packaging was identified for each country. In addition, five packaging solutions were pre-defined for which the corresponding fee indicator was calculated in each country. The packaging solutions are shown in Figure 1:

Figure 1: Overview of the four packaging solutions

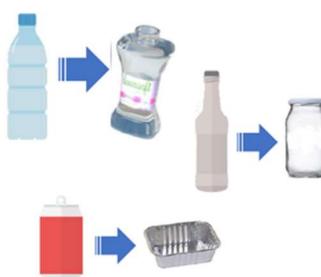

For the calculation, the fee indicators of the individual materials were identified on the respective PRO website. The fee indicators were given by weight, so that the respective indicator was multiplied by the respective weight of the product for the calculation. In some countries, other fees were also added. The detailed calculation for the five packaging solutions in the 18 countries for the years 2022 and 2023 can be found in the Annex.

Finally, the aggregate fee indicator was calculated for each Main PRO by summing up all five fee values. All fee values are expressed in euro cents.

For the following countries, the calculation approach was slightly different:

- Germany: a license calculator from PRO website was used, as it allows to calculate the fee value according to each material's quantity put on the market.
- UK: an average estimated cost value per material was used, as the national system is dynamic and prices vary continuously in relation to the market's performance of raw materials and the recycling cost (the fee for material is replaced by Certificates attesting the recycling quantities -Packaging Recycling Notes, PRN - at the expense of each obliged entity).
- France: The main PRO of France uses an articulated mechanism to calculate fees per material with detailed formulas. In this case, assumptions have been made about the inclusion of Bonus and Malus.

For some countries (in particular those East-European), the fee's value declared in local currency has been converted into euro currency of the period considered at the exchange. For countries where a Deposit Recycling System for Recycling (DRS) is active, for the Main PRO the value of the fee was calculated with reference to packaging of equivalent in weight and materials.

3 Fee indicators for 2023

The following table shows all calculated fee indicators for 2023. The indicators are all stated in cents and are presented in ascending order. They were determined according to the calculations in chapter 2. The 2023 values for two countries have not yet been published (as of Jan. 31, 2023).

*For countries where a Deposit Recycling System is active, the value of the fee was calculated with reference to packaging of equivalent in weight and materials.

In the table above the lowest and the highest fee values per packaging are highlighted in green and yellow respectively. Therefore, the results indicate that the fee values are:

- Lower in Italy (plastic, aluminum, cardboard and steel) and France (glass).
- Higher in Germany (plastic and steel), Sweden (aluminum), Czech Republic (cardboard) and UK (glass).

Overall, the aggregate fee indicator is lowest in Italy (1,399 cents), Luxembourg (2,374 cents) and Portugal (4,790 cents). On the other hand, the highest aggregate fee indicators were found in Germany (13,980 cents), Czech Republic (12,950 cents) and Sweden (12,668 cents).

4 Comparison of the 2022 and 2023 values

In order to identify the economic trends related to the fee, the study assessed a comparison between the two aggregate indicators from 2022 and 2023.² The list below is sorted according to the Trend 2023, from highest reduction to highest increase.

Table 2: Comparison between the fees of 2022 and 2023

Country	Main PRO	Aggregate Fee Indicator (cent) 2022	Trend 2023
Luxembourg	VALORLUX	3,341	- 28,9 %
Italy*	CONAI	1,705	- 18,0 %
Sweden	FTI	13,883	- 8,8 %

UK*	VALPAK	2,477	+ 289,7%
Slovenia	SLOPAK	2,334	n/a
Cyprus	GREEN DOT	n/a	n/a

*Countries with a population of more than 20 million.

² The Trend 2023 represents the delta of the absolute values; inflation rates were not taken into account.

The delta between the values of the two years shows that in 7 out of 18 Countries (38 %) was recorded a decrease in the fees from 2022 to 2023 with a significant reduction in Luxembourg (- 29 %) and in Italy (- 18 %); on the other hand, in 8 countries (40 %) an increase was recorded: the Country who registered the most significant increase is UK (+ 289,7 %), which is due to a sharp increase in PRN values between the beginning of 2022 and 2023.

5 Conclusion

As of end of January 2023, the aggregate fee indicator of Italy was the lowest. However, it remains to be seen how high Slovenia's fee indicator will be, as it was usually even lower than the Italian indicator in the past.

Overall, a decline in the aggregate fee indicator was only observed in seven countries between 2022 and 2023, while an increase was observed in eight countries. Luxembourg experienced the largest decrease with 29 %. Furthermore, UK has by far the highest delta due to high increases in PRN values between January 2022 and January 2023.
